Understanding Soiling in Children

Before diving into solutions, it's essential to grasp what soiling entails, its causes, and the emotional impact it can have on children.

What Is Soiling?

Soiling, medically known as encopresis, refers to the involuntary or intentional passage of stool outside the toilet, often accompanied by accidents or leakage. It frequently occurs in children who are past the age of toilet training but still struggle with bowel control.

Common Causes of Soiling

1. Chronic constipation: The most common cause, where hard stools block the rectum, leading to overflow soiling.
2. Toilet training issues: Anxiety or resistance towards toilet use can cause withholding behaviors.
3. Medical conditions: Such as neurological disorders or anatomical issues.
4. Psychological factors: Stress, anxiety, or emotional disturbances.
5. Poor toileting habits: Infrequent bathroom visits or improper positioning.
