- Serve as prototypes for underwater robots or devices.
- Facilitate studies of marine biology through foldable models.
- Enable deployment of structures in aquatic environments with minimal ecological impact.

Joseph Hwang's approach to

marine origami emphasizes biomimicry—drawing inspiration from marine organisms to solve engineering problems, such as designing deployable underwater sensors or soft robots capable of navigating complex underwater terrains. The Science Behind Marine Origami At its core, marine origami utilizes principles from:

- Kinematics and Mechanics: To design fold patterns that can transition between configurations smoothly.
- Material Science: To select or develop materials that withstand water pressure, corrosion, and biological interactions.
- Mathematical Modeling: To optimize fold patterns for stability, flexibility, and deployment efficiency.

Hwang's work often involves creating programmable fold structures that can fold and unfold autonomously or via external stimuli, such as water currents, temperature changes, or magnetic fields.

Joseph Hwang's Background and Inspiration

Educational and Professional Journey Joseph Hwang's academic background combines aerospace engineering, materials science, and art—an interdisciplinary foundation that uniquely positions him in the realm of marine origami. His doctoral research focused on deployable structures and soft robotics, emphasizing scalable and resilient foldable systems. Throughout his career, Hwang has collaborated with marine biologists, roboticists, and artists, fostering a multidisciplinary approach that pushes the boundaries of traditional origami.

Inspirations and Influences Hwang cites several sources of inspiration:

- Marine Biology: The forms, movements, and adaptive features of marine organisms.
- Origami Masters: Classic origami techniques from Japanese, Chinese, and Western traditions.
- Engineering Challenges: The need for deployable, minimally invasive underwater devices for exploration and conservation.
