Understanding the Bosch Injection Pump Calibration Chart

What is an Injection Pump Calibration Chart?

An injection pump calibration chart is a detailed graphical or tabular representation of the pump's operational parameters. It maps out the relationship between injection timing, fuel quantity, and engine RPM for specific Bosch pump models. These charts help technicians calibrate pumps accurately, ensuring the engine receives the right amount of fuel at the correct timing. Proper calibration maximizes efficiency, power output, and emissions compliance.

Components and Data Included in the Chart

Most Bosch calibration charts include key data points such as:

- **Injection Timing:** The precise moment when fuel injection occurs relative to piston position, often expressed in degrees before or after top dead center (TDC).
- **Fuel Delivery Rate:** The amount of fuel injected per cycle, often in cc or mm³.
- **Pump Speed (RPM):** The engine or pump rotational speed at which specific parameters are calibrated.
- **Pressure Settings:** Commonly, the line or rail pressure necessary for optimal atomization.
- **Calibration Points:** Specific points where parameters are adjusted or tested for consistency. This data allows for precise adjustments to be made, tailored to engine requirements or performance goals.

Types of Bosch Injection Pumps and Corresponding Charts

Common Bosch Pump Models

Bosch manufactures a variety of injection pumps, each with unique calibration charts:
