Common Medical Sociology Questions and Their Answers

Below are some frequently asked questions in medical sociology, along with comprehensive answers to facilitate learning and application.

1. What is the Social Model of Health?

The social model of health emphasizes that health outcomes are largely influenced by social, economic, and environmental factors rather than just biological ones. It advocates for a holistic approach to health, considering the broader social determinants such as income, education, employment, housing, and social support systems. This model contrasts with the biomedical model, which focuses solely on biological factors.

2. What are Social Determinants of Health?

Social determinants of health are the conditions in which people are born, grow, live, work, and age. These factors significantly impact individual and community health. Key social determinants include:

1. Socioeconomic status
2. Education level
3. Employment status
4. Housing quality
5. Access to healthcare services
6. Social support networks
7. Environmental conditions

Understanding these determinants helps in designing interventions aimed at reducing health disparities.

3. How Does Social Class Affect Health?

Social class influences health through various pathways:

1. Access to quality healthcare services
2. Living conditions and environmental exposures
3. Health-related behaviors and lifestyle choices
4. Stress levels associated with economic insecurity
5. Educational opportunities impacting health knowledge

Lower social classes often face higher rates of illness and mortality due to limited resources and increased exposure to health risks.

4. What is Health Disparity?

Health disparity refers to differences in health outcomes and access to healthcare services among different population groups, often rooted in social, economic, and environmental disadvantages. These disparities can manifest across various axes, including race, ethnicity, gender, and socioeconomic status.

Medicalization refers to the process by which non-medical problems become defined and treated as medical issues. Examples include the medical framing of behaviors like childbirth, mental health, or aging. While medicalization can lead to better care, it may also pathologize normal life processes and increase dependency on medical interventions.

8. How Do Healthcare Systems Differ Across Countries?

Different countries adopt various healthcare models, primarily:

1. **Beveridge Model:** Healthcare is provided and financed by the government (e.g., UK NHS).
2. **Bismarck Model:** Insurance is funded through payroll deductions, with providers usually private (e.g., Germany).
3. **National Health Insurance Model:** Combines features of both, with government-run insurance covering private providers (e.g., Canada).
