Applications:

1. Determining reservoir productivity.
2. Identifying fluid types and contacts.
3. Making decisions on well completion.

1. Production Tests

Purpose: To quantify the flow rate, pressure, and fluid composition during normal production operations.

Process: The well is stabilized at a certain flow condition, and data are collected over a period, often including shut-in periods to evaluate pressure buildup.

Applications:

1. Estimating ultimate recoverable reserves.
2. Monitoring well performance over time.
3. Evaluating the efficiency of artificial lift systems.

1. Pressure Transient Tests

Purpose: To analyze pressure behavior during well shut-in or flow periods, revealing reservoir properties such as permeability and boundaries.

Types:
