Question 3: Describe the process of georeferencing in GIS.

Answer: Georeferencing involves aligning spatial data (like scanned maps) to a coordinate system so that the data corresponds accurately to real-world locations. This is done by identifying control points with known coordinates and transforming the dataset accordingly.

Question 4: Which GIS data format is commonly used for sharing spatial data over the web?

Answer: GeoJSON is a widely used format for web-based GIS applications due to its lightweight nature and compatibility with web technologies.

Question 5: What is the purpose of a buffer analysis in GIS?

Answer: Buffer analysis creates zones around features (like roads or rivers) at specified distances, useful for proximity analysis, environmental impact assessments, and planning.
