Core Ecological Relationships Covered

in the Lab and Answer Key

1. Predator-Prey Relationships

One of the fundamental relationships studied involves predator and prey dynamics. These interactions regulate population sizes and influence community structure. Key Points: - Predators hunt prey species for food - Prey species develop adaptations to avoid predation - Examples in NYS include wolves preying on deer or owls hunting mice Sample Question & Answer: Q: What is the effect of increased predator populations on prey species? A: Increased predators typically decrease prey populations, which can lead to a more balanced ecosystem.

2. Mutualism and Commensalism

These relationships involve positive interactions between species that benefit one or both parties. Examples: - Bees pollinating flowers (mutualism) - Epiphytes growing on trees without harming them (commensalism) Educational Focus: - Recognizing mutualism as mutual benefit - Understanding how these relationships sustain biodiversity

3. Competition

Species often compete for limited resources such as food, space, or light. Types of Competition: - Intraspecific (within

the same species) - Interspecific (between different species)

Implications: - Competition shapes species distribution - Can lead to resource partitioning or competitive exclusion

4. Symbiosis and Parasitism

Some species have close, long-term interactions that may be parasitic. Examples: - Ticks feeding on mammals in NYS - Parasitic plants attaching to host trees Key Concepts: - Parasitism benefits one species at the expense of the other - Symbiosis can be mutualistic, parasitic, or commensal
