Sample Midwifery MCQs with Answers

Below are some representative MCQs across different categories, accompanied by detailed explanations.

1. Antenatal Care

Q1: Which of the following is the most appropriate time to perform a first-trimester ultrasound for dating pregnancy? a) 6 weeks gestation b) 8-10 weeks gestation c) 12 weeks gestation d) 20 weeks gestation
Answer: b) 8-10 weeks gestation
Explanation: The optimal window for a first-trimester ultrasound for accurate dating is between 8 and 10 weeks gestation, when the crown-rump length measurement is most reliable. Earlier scans (around 6 weeks) might be less accurate due to very early gestational development, while later scans are better suited for anomaly detection.

2. Intrapartum Care

Q2: Which fetal heart rate pattern is most indicative of fetal distress? a) Baseline rate of 140 bpm with moderate variability b) Baseline rate of 160 bpm with accelerations c) Baseline rate of 120 bpm with late decelerations d) Baseline rate of 130 bpm with early decelerations
Answer: c) Baseline rate of 120 bpm with late decelerations
Explanation: Late decelerations, especially when persistent, are associated with uteroplacental insufficiency and fetal hypoxia, indicating fetal distress. The baseline rate of 120 bpm is slightly below the normal range, further raising concern.

3. Postpartum Care

Q3: Which of the following is the most common cause of postpartum hemorrhage? a) Retained placenta b) Uterine atony c) Placental abruption d) Vaginal tears
Answer: b) Uterine atony
Explanation: Uterine

atony, where the uterus fails to contract effectively after delivery, is responsible for approximately 70-80% of postpartum hemorrhage cases. Proper uterine massage and administration of uterotonics are primary interventions.

4. Neonatology

Q4: A newborn is born with a respiratory rate of 70 breaths per minute, grunting, and nasal flaring. What is the most probable diagnosis? a) Neonatal sepsis b) Neonatal hypoglycemia c) Neonatal respiratory distress syndrome d) Neonatal jaundice Answer: c) Neonatal respiratory distress syndrome Explanation: The signs described—tachypnea, grunting, nasal flaring—are characteristic of respiratory distress. Neonatal respiratory distress syndrome is common in preterm infants due to surfactant deficiency.

5. Professional Practice & Ethics

Q5: When providing informed consent for a procedure, the midwife must ensure that the patient: a) Understands the procedure and its risks b) Agrees without questions c) Signs the consent form immediately d) Is coerced to consent to avoid delays Answer: a) Understands the procedure and its risks Explanation: Ethical practice requires that informed consent be based on the patient's understanding of the procedure, its benefits, risks, and alternatives. Coercion or inadequate information undermine autonomy and professionalism.

Copyright basics for PDF documents
